Various types of logistics systems such as material supply chains, product recovery, and similar biomass-to-energy systems include intermediate facilities to aggregate materials and stabilize inventory (Fleischmann et al., 2000; Gold and Seuring, 2011; Iakovou et al., 2010; Pohlen and Theodore Farris, 1992), a concept that has not been extensively researched for food waste management. These facilities could act as central hubs within waste supply chains for multiple organic recovery ...
