Strong significant intercorrelations were found between the Occupational Therapy Cognitive Assessment (LOTCA), the MMSE and the FIM-Cognitive subscale (Canbek, 2013) Fifty-five participants who experienced their first-ever stroke and went to an IRF an average of 8± 5 days post-stroke.

Functional Independence Measure | RehabMeasures Database

Several studies in this review used standardised and validated assessment tools such as the RKE-R (Neistadt, 1992a), the Cooking Task (Chevignard et al., 2000), and the Kettle Test (Hartman-Maeir et al., 2009). These assessments use a KRT as the main task to systematically assess individuals' levels of task performance and to identify deficits.

Neuropsychological Testing (eg. Ross Information Processing Assessment, LOTCA- Loewenstein OT Cognitive Assessment, MVPT - Motor-Free Visual Perception Test, ACL - Allen Cognitive Test), per hour of the OT's time, both face-to-face time administering tests to the patient and time interpreting these test results and preparing the report. This is ...

LCD - Outpatient Occupational Therapy (L34427)

The bibliography offered hereafter is organized alphabetically and not, as in many past years, by specific topics or geographic areas. For reasons more fully explained in the article entitled “Comparative Education Review Bibliography 2015: Galloping Growth and Concluding Reflections” in the November 2016 issue of the journal, the “pigeonholing” of references into unique categories has ...
