Fundamentals of Differential Equations | R. Kent Nagle ...
R. Kent Nagle, Edward B. Saff, Arthur David Snider For one-semester sophomore- or junior-level courses in Differential Equations. An introduction to the basic theory and applications of differential equations. We can determine the concentration of salt in the tank by dividing $x(t)$ by the volume of the solution, which remains constant, 50 L, because the flow rate in is the same as the flow rate out. Therefore, the concentration of salt at time t is $x(t)/50$ kg/L and output rate = $x(t)$ 50 (kg/L) 6(L/min) = $3x(t)$ 25 (kg/min).
