Opel Astra Diesel Engine Problems

Forced induction failure. Opel Astra 2005 138000 miles. Engine. A light indicating there is a damage in the engine turns on and it is hard for the vehicle to gain speed. It does not exceed 3000 rpm and, when accelerating deeply, the car does not respond and seems to be stuck.

Opel Astra Engine: problems and issues - StartMyCar

Quite recently, my Opel Astra 1997 started failing at idle speed; it needs to be accelerated continuously so that the engine does not stall. The IAC valve has been replaced and the computer reset as it was indicated, but the problem remained.

Opel Astra problems and issues - StartMyCar

Common problems for the Opel Astra. Some problems will only occur after many years of operation, others are related to technical solutions and forced the manufacturer to issue a recall. In the following overview, you will find the most common problems for the Opel Astra, for which Opel has announced a recall through the EU Rapex system.

Opel Astra - Common problems « Car-Recalls.eu

The only engines that had conventional automatic gearboxes were the 1.8L petrol and the 1.9 CDTi diesel cars. These automatic transmissions experienced radiator failures in the Vectra C, Astra H, Zafira B and other Vauxhall cars from those years.

I have now owned two Astra 1.6cdti both of which have the same engine fault. When starting the engine and also occurring at random times within a journey the engine can get incredibly noisy to such a level it is distressing, forcing me off the road, until it drops to a normal level which can take 4-5 minutes.

Opel Astra Diesel Engine Problems

However, if you're doing lots of short trips, then carbon cleaning may be on the horizon. Anyway, carbon-build up is not a massive issue with Vauxhall / Opel SIDI engines. Just watch out for symptoms of carbon build-up in high-mileage cars. The only two engines with direct injection in the Astra J are the 1.6T SIDI & 2.0T SIDI. The 2.0T SIDI was used in the Astra VXR (or Astra OPC outside of UK).

Problem: The idle control valve is responsible for controlling the amount of air getting to the engine when the engine is running idle. It will either not allow enough air to the engine, which could result in stalling, or allow too much air to get to the engine which results in really high revs. Check out the video below for more information.
