Doris Rauhut, Florian Kiene, in Red Wine Technology, 2019. Abstract. Red wine quality and style are highly influenced by the qualitative and quantitative composition of aromatic compounds having various chemical structures and properties and their interaction within different red wine matrices. The understanding of interactions between the wine matrix and volatile compounds and the impact on ...

1. Introduction. The blockchain technology (BT) offers great potential to foster various sectors (Casino et al., 2018) with its unique combination of characteristics, for example, decentralization, immutability, and transparency. We see promising possibilities in the use of this technology for science and academia.

Each wine in this dataset is given a “quality” score between 0 and 10. For the purpose of this project, I converted the output to a binary output where each wine is either “good quality” (a score of 7 or higher) or not (a score below 7). The quality of a wine is determined by 11 input variables: Fixed acidity; Volatile acidity; Citric acid
