Note that some of the “free” ebooks listed on Centsless Books are only free if you’re part of Kindle Unlimited, which may not be worth the money.

### Whales

Whales are a widely distributed and diverse group of fully aquatic placental marine mammals.They are an informal grouping within the infraorder Cetacea, usually excluding dolphins and porpoises.Whales, dolphins and porpoises belong to the order Cetartiodactyla, which consists of even-toed ungulates.Their closest living relatives are the hippopotamuses, having diverged about 40 million years ago.

### Whale - Wikipedia

Whale, any of the larger species of aquatic mammals belonging to the order Cetacea. Whales are the heaviest known animals, living or fossil, reaching a maximum size in the blue whale of perhaps more than 30 meters and 200 metric tons. They are distributed throughout the world’s oceans and seas.

### whale | Definition, Types, & Facts | Britannica

Whales are at the top of the food chain and have an important role in the overall health of the marine environment. Whales play a significant role in capturing carbon from the atmosphere; each great whale sequesters an estimated 33 tons of CO2 on average, thus playing their part in the fight against climate change.

### Whale | Species | WWF

### Whales - Animals

Baleen whales and toothed whales feed very differently. While tooth whales are grabbers and suckers, baleen whales are either skimmers, suckers or gulpers! Toothed whales (including dolphins and porpoises) all have teeth but the number, size and position, and even purpose of their teeth, varies from species to species.

### Facts about whales - Whale & Dolphin Conservation USA

Introduction to Whales. Whales are one of the most amazing creatures that live in the planet. They inhabit all oceans of the world. Whales belong to the order cetacea, which means that they are mammals fully adapted to aquatic life.Like all cetaceans, including dolphins and porpoises, whales are descendants of land-living animals which returned to water after living millions of years in land.

### Whale Facts and Information

The Sperm Whale is the largest of all toothed whales, and many people immediately think of the story of Moby Dick when they see one. Beluga Whale The Beluga Whale offers a whitish color and you will notice it has a type of formation to the head that is sticking out somewhat.

### Whale Species - Whale Facts and Information

The rearward migration of these bones is the process by which the nasal openings have moved to the top of the skull, creating blowholes and shifting the brain and the auditory apparatus to the back of the skull. The odontocetes (toothed whales) have a single blowhole, while the mysticetes (baleen whales) have paired blowholes.

### The Origin of Whales and the Power of Independent Evidence

Wales, constituent unit of the United Kingdom that forms a westward extension of the island of Great Britain. Its capital and main commercial and financial center is Cardiff. Famed for its rugged landscape, Wales retains aspects of Celtic culture that are markedly different from those of its English neighbors.
