72 CHAPTER 4. NUMERICAL DIFFERENTIATION AND INTEGRATION To measure the degree of accuracy, we assume that the best choice of these values produces the exact result for the largest class of polynomials, that is, the choice that gives the greatest degree of precision. The coefficients c_0, c_1, \dots, c_n in the formula are arbitrary, and the nodes x_0, x_1, \dots, x_n

Chapter 4: Derivatives 3 0.01, the truncation error for the central difference derivative should be on the order of $(0.01)^2 = 0.0001$. If the error of the central difference method is better, why isn't it always used? The central difference method requires two function calls per derivative instead of one for the forward difference method.

Chapter 6 Numerical Differentiation and Integration . 6.1 Numerical Differentiation . When a function is given as a simple mathematical expression, the derivative can be determined analytically. When analytical differentiation of the expression is difficult or impossible, numerical differentiation has to be used. When the function is specified as a

In calculus, differentiation is one of the two important concept apart from integration. It is a method of finding the derivative of a function or instantaneous rate of change in function based on one of its variables. If x is a variable and y is another variable, then the rate of change of x with respect to y is given by dy/dx .

Let us first make it clear what numerical differentiation is. Problem 11.1 (Numerical differentiation). Let f be a given function that is only known at a number of isolated points. The problem of numerical differentiation is to compute an approximation to the derivative $f'(x)$ of f by suitable combinations of the known values of f .

Chapter 4 Symbolic Differentiation. In the last chapter we approximated derivatives by using a balanced difference quotient. For most functions that gave an easy approximation without any rules other than the conceptual understanding that we obtained the derivative by zooming in far enough for the graph to look like a straight line.
