In this section we define the Fourier Series, i.e. representing a function with a series in the form  $\sum(A_n \cos(n \pi x / L))$  from  $n=0$  to  $n=\infty$  +  $\sum(B_n \sin(n \pi x / L))$  from  $n=1$  to  $n=\infty$ . We will also work several examples finding the Fourier Series for a function.

In this Tutorial, we consider working out Fourier series for functions  $f(x)$  with period  $L = 2\pi$ . Their fundamental frequency is then  $k = 2\pi / L = 1$ , and their Fourier series representations involve terms like  $a_1 \cos x + b_1 \sin x + a_2 \cos 2x + b_2 \sin 2x + a_3 \cos 3x + b_3 \sin 3x$  We also include a constant term  $a_0/2$  in the Fourier series. This

Exercises on Fourier Series Exercise Set 1.1. Find the Fourier series of the function  $f$  defined by  $f(x) = -1$  if  $-\pi < x < 0$ ,  $1$  if  $0 < x < \pi$ , and  $f$  has period  $2\pi$ . What does the Fourier series converge to at  $x = 0$ ? Answer:  $f(x) \sim 4/\pi \sum_{n=0}^{\infty} \sin((2n+1)x) / (2n+1)$ . The series converges to 0. So, in order to make the Fourier series converge to  $f(x)$  for all ...

Examples of Fourier series 7 Example 1.2 Find the Fourier series for the function  $K(x)$ , which is given in the interval  $[-\pi, \pi]$  by  $f(t) = 0$  for  $-\pi < t < 0$ ,  $1$  for  $0 < t < \pi$ , and  $f$  has period  $2\pi$ . Obviously,  $f(t)$  is piecewise  $C^1$  without vertical half tangents, so  $f(x) = \frac{1}{2} + \frac{1}{\pi} \sum_{n=1}^{\infty} \frac{\sin nx}{n}$ . Then the adjusted function  $f(t)$  is defined by  $f(t) = f(t) - \frac{1}{2}$ .

**Examples of Fourier series**  
The Fourier series is named in honour of Jean-Baptiste Joseph Fourier (1768–1830), who made important contributions to the study of trigonometric series, after preliminary investigations by Leonhard Euler, Jean le Rond d'Alembert, and Daniel Bernoulli. Fourier introduced the series for the purpose of solving the heat equation in a metal plate, publishing his initial results in his 1807 ...
