The naive model just forecasts the previous observation to the current observation. The MASE is the ratio of the MAE over the MAE of the naive model. In this way, when the MASE is equal to 1 that means that your model has the same MAE as the naive model, so you almost might as well pick the naive model.

How To Measure The Accuracy Of Predictive Models - Acheron ...

Total quality is a reference model for a good sports management then you have to put in evidence the expectations of the sports population, officials, practitioners or supporters, and there can say we are on the right track by compared to total quality data [1].
