The main component of the composite insulator is a silicone rubber sheath. Silicone rubber is formed by the linkage of high-molecule polymers of polydimethyl siloxane and organic oxygen compounds; the main chain is formed by a silicon oxygen bond.

Composite Insulator - an overview | ScienceDirect Topics

Composite insulators. Insulators are used in electrical equipment to support and separate electrical conductors without allowing current to pass through the insulators. Silicone rubber is the most widely used polymeric insulation material for high voltage products. Our composite insulators have excellent performance in all climates and harsh conditions such as coastal, desert and industrial environments.
