Creatinine Ratio (UACR)

Uacr
The urine albumin-to-creatinine ratio (UACR) shows whether you have albumin in your urine. Albumin is a type of protein that's normally found in the blood. Your body needs protein. It's an important nutrient that helps build muscle, repair tissue, and fight infection.

Kidney Failure Risk Factor: Urine Albumin-to-Creatinine ...

Bookmark File

Albuminuria is the presence of albumin in the urine and a marker of kidney damage. It is normal for individuals to excrete very small amounts of protein in the urine, but the albumin-to-creatinine ratio (ACR) is the first method of preference to detect elevated protein, measuring urinary ACR in a spot urine sample.
